

MyChart COVID Results for Proxy View

Any proxy for patients ages 13-17 will now be able to see the last 5 COVID-19 test results via MyChart.

Viewing COVID Results for MyChart Proxy

These steps apply to both the MyChart Mobile app as well as the MyChart Website.

1. If the Proxy opens the patient's MyChart, the *COVID-19 Test Results* section appears in the Menu.
2. Clicking the section title will open the screen to display the 5 most recent results.

*****PLEASE NOTE: IF VIEWING FROM THE MYCHART MOBILE APP, THE COVID-19 RESULTS FOR PROXY WILL OPEN IN A WEB BROWSER ON THE PHONE*****

Website View

The screenshot shows the MyChart website interface. On the left, a sidebar menu is open, with 'COVID-19 Test Results' highlighted and circled with a '2'. A red arrow points from this menu item to the main content area. The main content area shows the 'Recent COVID-19 Results' section, which displays a table of test results for 'SARS COV 2 RNA'.

Date	Value	Ref Range	Status
03/26/2021	NOT DETECTED	NOT DETECTED	Final

Comment:
A Not Detected (negative) test result for this test means that SARS- CoV-2 RNA was not present in the specimen above the limit of detection. A negative result does not rule out the possibility of COVID-19 and should not be

Mobile App View

The screenshot shows the MyChart mobile app interface. The bottom navigation bar has a menu icon circled with a '1'. A red arrow points from this icon to a detailed menu overlay. In the overlay, 'COVID-19 Test Results' is highlighted and circled with a '2'. Another red arrow points from this menu item to the right, where a screenshot of the test results page is shown. The test results page displays the same table as the website view.

Date	Value	Ref Range	Status
03/26/2021	NOT DETECTED	NOT DETECTED	Final

Comment:
A Not Detected (negative) test result for this test means that SARS- CoV-2 RNA was not present in the specimen above the limit of detection. A negative result does not rule out the possibility of COVID-19 and should not be used as the sole basis for treatment or patient management decisions. If COVID-19 is still suspected, based on exposure history together with other clinical findings, re-testing should be considered in consultation with public health authorities. Laboratory test results should always be considered in the context of clinical observations and epidemiological data in making a final diagnosis and patient management decisions.

Please review the "Fact Sheets" and FDA authorized labeling available for health care providers and patients using the following websites:
